

Interested in ecology or zoology... fancy visiting Hawaii?

PhD scholarship available
immediately: *Native parasitic wasps
for fruit fly management*
\$26,000 pa plus generous operating
and professional development support.

Based in Wagga Wagga and with extended travel to collaborating laboratories in Hawaii, this PhD position offers stimulating training in biological pest management and biosecurity.

The ideal candidate will have a strong academic background in entomology, ecology or agricultural science with some experience of pest management research and be an Australian citizen/permanent resident. The project is funded by the Cooperative Research Centre for National Plant Biosecurity, Horticulture Australia Ltd and Riverina Citrus. As well as working closely with industry members on one of Australia's most serious pests, the student will enjoy access to research facilities at NSW Department of Primary Industries.

Know-how for Horticulture™
